WORK EXPERIENCE

I have **4 years of experience** working on infrastructure projects across the Middle East and Asian regions. Below are the details of my professional experience:

AECOM EC INDIA, Bangalore.

- **Assistant Modeler - Planning (Water)** **Oct 2025 - Present**

Working on wet utility infrastructure projects in the Qatar region using AutoCAD, Civil 3D, and Navisworks. Coordinating with engineers to prepare 2D and 3D models of pipe & pressure networks, detailed layouts, longitudinal profiles and standard details drawings for wet utility networks. Performing clash detection and multidisciplinary coordination to ensure constructability and proper system integration.

HSS BIM SOLUTIONS, Chennai.

- **Senior BIM Modeler** **Jan 2024 – Sep 2025**

Modeled and coordinated infrastructure projects include water supply, sewage, drainage, electrical, telecom networks, and bridge elements using Civil 3D and Revit. Created detailed profiles, managed data shortcuts, and developed parametric Revit families as per BEP standards. Performed clash detection and coordination using Navisworks to ensure smooth multidisciplinary integration and constructability.

- **Junior BIM Modeler** **Aug 2022 – Dec 2023**

Modeled residential and commercial buildings with surrounding topography using Revit Architecture. Organized spaces and zones according to French standards and generated quantity take-offs and detailed sheets using Dynamo for tagging and unique IDs. Integrated component data performed quantity and volume calculations and delivered structured IFC models for Facility Management. Produced outputs including Revit models, IFC files, PDFs, and Excel reports.

EDUCATION

- **BE in Civil Engineering – 7.3 CGPA** **Aug 2017 – Apr 2021**

  Thamirabharani Engineering College, Anna University.

- **HSE – 84.6%** **Jun 2015 – Apr 2017**

  St John's Higher Secondary School.

WORKED PROJECTS

- **Al-Ula Cultural Oasis District, Qatar** 🔗

Contributed to the BIM modeling and development of road and utility distribution networks, including pipe and pressure systems using Civil 3D. Generated detailed shop drawings for pipe and pressure networks, including overall layouts, index drawings, cut sheets, and profile sheets. Created and managed layout plans, longitudinal profiles, and utility schedules to support construction deliverables. Performed clash detection and resolution using Navisworks and profile adjustments to ensure proper coordination between disciplines. Collaborated closely with engineers and multidisciplinary teams to ensure accurate outputs, drawing and model qualities, timely submissions and successful project deliverable.

Software Used: Civil 3D, Auto CAD, Navisworks, and ACC.

- **Diriyah Gate Development Authority (DGDA), Saudi Arabia** 🔗

Contributed to the BIM modeling of utility networks, including irrigation systems and cable conduits using Civil 3D. Developed and managed detailed 3D utility models, ensuring accuracy and compliance with project standards. Performed clash detection and resolution with wet and dry services through coordination reviews, utilizing Revizto for interdisciplinary collaboration and issue tracking. Actively coordinated with engineers and multidisciplinary teams to ensure timely delivery of accurate models, drawings, and project deliverables.

Software Used: Civil 3D, Auto CAD, Revizto, Navisworks and BIM360.

- **Sungai Marang Bridge Upgrade, Malaysia.** 🔗

In this project I'm contributed to the BIM modeling and coordination for the upgrade of the Sg. Marang Bridge and road infrastructure using Revit and Civil 3D**.** Developed a 4-lane, two-way road design over a 1.5 km stretch, ensuring compliance with BEP standards. Modeled the flyover structure, upgraded two major bridges at Sg. Marang and Sg. Rinting and integrated a comprehensive drainage system to improve water flow and mitigate flood risks. Designed and coordinated streetlights, traffic signals, and utility diversions, ensuring seamless integration with the road network. Utilized Navisworks for clash detection, ensuring smooth execution and minimizing design conflicts.

Software Used: Revit, Civil 3D, Auto CAD, Navisworks.

- **The Mutiara Line LRT, Malaysia.** 🔗

In this project I'm contributed to the BIM modeling of water supply networks, sewage systems, telecommunication lines, and electrical cables using Civil3D**.** Developed and managed detailed utility models**.** And played a key role in clash detection and resolution using Navisworks.

Software Used: Civil 3D, Auto CAD, Navisworks.

- **King Salman Park, Saudi Arabia.** 🔗

In this project I'm contributed to the BIM modeling of utility networks, including digital infrastructure, district cooling, potable and non-potable water, storm water, and wastewater systems using Civil 3D. Created and managed detailed utility models, added tags, extracted manhole schedules, and developed comprehensive profile views utilizing data shortcuts. Played a key role in clash detection and resolution through profile adjustments and Navisworks coordination, ensuring seamless integration of underground and surface utilities.

Software Used: Civil 3D, Auto CAD, Navisworks.

- **Infinaxis Cyberjaya Data Centre, Malaysia.** 🔗

In this project I'm independently modeled the roads, sewage, drainage, road furniture, and water supply around the data center using Revit. Created and integrated sewage and drainage systems, optimizing flow and spatial coordination. Modeled essential road furniture and water supply infrastructure, ensuring compliance with design standards and project requirements.

Software Used: Revit, Auto CAD, Navisworks.

- **Penang South Reclamation (PSR), Malaysia.** 🔗

In this project independently modeled the water supply network, including incoming, distribution, and recycled water pipelines with detailed profiles and data shortcuts using Civil3D. And developed elevated overhead water tanks along with their MEP components and truss supports for pipelines in Revit. Conducted clash detection and resolution using Navisworks.

Software Used: Revit, Civil 3D, Auto CAD, Navisworks.

- **BIMer Services, France.** 🔗

In this project, am modeled some existing residential and commercial buildings**,** along with topography surrounding the structures, using Revit Architecture. Creating organized spaces, zones, and component quantity take-offs in compliance with French standards. Generating detailed sheets for zones and spaces, incorporating tags and unique IDs for each respective zone with the help of Dynamo. Integrate intervention data for components and perform quantity and volume calculations**,** exporting results to Excel sheets. Delivered a structured IFC model**,** ensuring seamless data exchange for Facility Management (GEM)**.**

Software Used: Revit Architecture, Dynamo, MS Excel, MS Word and IFC viewer.

- **Kwasa Damansara, Malaysia.** 🔗

In this project I'm Modelled utilities including electrical, telecom, water supply, sewer, drainage, streetlights, and road furniture in Civil3D. And Modelled proposed high zone water reservoir structure along with MEP services, topography, drains, and electrical control rooms in Revit. Used Navisworks for clash detection, resolving internal clashes and coordinating with other packages to ensure a clash-free model.

Software Used: Revit, Civil3D, Navisworks, AutoCAD.

- **MRCB's Mukim Setapak, Malaysia.** 🔗

In this project I'm independently modeled road, drainage, electrical, and telecom services around the building in Revit. Created custom parametric families for drainage and road furniture in Revit. Resolved internal and interdisciplinary clashes around the building to ensure a clash-free model.

Software Used: Revit, Navisworks, AutoCAD.

- **Subang Airport Regeneration Plan (SARP), Malaysia.** 🔗

In this project I'm independently modeled sewer, drainage, telecom, water, low- and high-voltage electrical services, streetlights in Civil3D and Modelled Road furniture in Revit, including medians, lanes, and signage. Conducted clash detection using Navisworks to ensure a clash-free model.

Software Used: Revit, Civil3D, Navisworks, AutoCAD.
